PeriNet's Multi-Layered Security Architecture

MLSA

This comprehensive layered approach combined with industry best-practices, ongoing maintenance, and continued technology improvement to meet ever-growing and changing threats, is what sets PeriNet Technologies apart from the competition.

Technology that
powers your business.
Security that protects it.

Technology that powers your business. Security that protects it.

The power of PeriNet

No matter what business you're in, information is your most valuable asset. Imagine what information you access and tasks you perform on your computer, and what it would be like to lose it all. Now imagine a breach of security that affects every computer on your company network for hours, or even days.

At PeriNet Technologies we help protect your business from the headaches and hassles, the time and tremendous cost, of having an unstable, insecure network. Our sophisticated technology powers your business so the only thing you have to focus on is building it.

Why choose PeriNet? Because we don't deal in "point solutions" that may leave other areas of your network vulnerable. We have in-depth knowledge of every level of network architecture and system security to fit your unique business. We're able to see the "big picture" and apply appropriate solutions—whether you need a comprehensive, customized plan, or you need us to work with what you already have.

And for every job we do, we use a Multi-Layered Security Architecture (MLSA), applying numerous layers of defense, as well as best practices and appropriate best-of-breed technologies to ensure complete protection throughout your network.

The power of Technology

PeriNet Technologies specializes in network security and infrastructure solutions for a diversity of industries throughout the tri-state region, including verticals such as education, healthcare, financial/accounting, transportation and manufacturing.

Our highly skilled staff brings years of technology experience and perspective to each job, and holds industry-recognized certifications from leading companies such as Cisco and Microsoft. What's more, our relationships with best-of-breed vendors ensure that we deliver the most cutting-edge solutions, products and best practices in the industry, right to your business.

Because helping your business securely leverage technology is our mission. At PeriNet we're dedicated to understanding your individual needs so we can implement the most effective security and network solutions *for you*. We listen to what you have to say about your business and where it's going—and we make sure everything we do helps you get there.

"Solutions
tailored to
your needs"

"best-of-breed technologies to
protect your business"
